

Case Study

Wireless Telephony for "Alexandra Maternity Hospital"

The Customer: ALEXANDRA MATERNITY HOSPITAL of ATHENS GREECE

Alexandra is one of the best known Academic Hospitals in Greece with modern technological infrastructure and extensive experience with obstetrics. The hospital is a modern nursing unit with a capacity of 400 beds, and provides high level medical services. The hospital consists of four buildings equalling a total area of 25,000m².

The needs: People with various tasks such as: Managers, Doctors, Nurses, Technicians, Administrative Staff need to remain in contact with each other even when they are on the move, whether it be inside the different buildings or in the vicinity. To make this possible a KWS1500 was installed

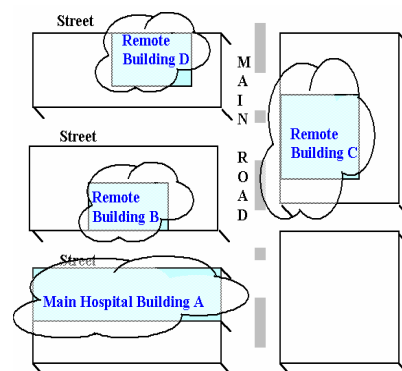

The Infrastructure: There is one Coral FlexiCom 5000 PABX in the main Building. And there are no cabling infrastructure and PABX systems as well in some of the remote Buildings

The equipment used:

- 2 x KWS 1500 (Link System)
- 17 x base stations-RFP
- 4 x repeaters-WRFP
- 70 x Handsets 3040 / 4020

The Results: With the introduction of the KWS1500, the Alexandra Hospital has experienced a significant increase in efficiency. Staff members save time as the amount of returned and unanswered calls greatly reduced, which in turn means cost savings for the hospital and better service for customers. The KWS 1500 system offers staff members flexibility and mobility to always provide the best customer service possible. It furthermore ensures the capability to easily expand the network whenever the need to do so should occur.
